EDUCATION

Purdue University | West Lafayette, Indiana **May 2029**

***B.S. in Computer Engineering**, Minors in Finance and Mathematics, Certificate in Entrepreneurship*

Relevant Coursework: Systems Programming, Data Structures & Algorithms, Discrete Math, Applied Machine Learning

TECHNICAL SKILLS

Languages: Python, **SQL**, C/C++, **Java**, JavaScript, Verilog

Technologies: Git, Node.js, REST APIs, Docker, React.js

Tools: OpenCV, Arduino, Jupyter, Pandas/NumPy, Anthropic API, Verilog, Azure

RELEVANT EXPERIENCE

Purdue Department of Electrical and Computer Engineering | West Lafayette, Indiana **Jan. 2026 – Present**

Software Developer

- Developed Python-based software for a next-generation braille device over a 5-month development cycle, improving accessibility for visually impaired users.
- Tested, debugged, and optimized system functionality across 4–5 iterative Linux-based test cycles.
- Integrated Arduino-based hardware components with software systems to enable real-time braille interaction.
- Collaborated with a team of engineers and stakeholders to improve device accessibility and convenience.

Mathnasium | Leesburg, Virginia **Aug. 2024 - Feb. 2025**

Math Instructor/Tutor

- Instructed 10+ students weekly, both individually and in small groups, in algebra, geometry, and calculus, tailoring explanations to each student's pace and learning style.
- Diagnosed gaps in foundational math understanding and built targeted practice plans to strengthen problem-solving skills.
- Received consistent positive feedback from parents citing improved classroom performance and confidence in their children following individualized instruction.

VA Basketball Camp | Ashburn, VA **May 2023 - Aug. 2025**

Founder and Coach

- Founded and coached a youth basketball training camp focused on player development and teamwork.
- Mentored and trained 30+ student athletes through practices and individualized coaching.
- Managed scheduling, communication, and day-to-day camp operations/logistics.
- Generated $2,500 in camp revenue through participant enrollment and program organization.

PROJECTS

AI-Driven Trading Bot | Python, Claude API, Alpaca API, yfinance, NewsAPI | GitHub **March 2026**

- Built an autonomous trading system that uses a Yahoo Finance scanner to generate a dynamic 20-stock watchlist, feeding real-time price data and news headlines to an LLM (Claude Haiku) for BUY/SHORT/SKIP decisions with confidence scoring.
- Integrated a SPY trend filter, position-sizing caps, and stop-loss/take-profit logic (5% stop, 10% target) to manage risk within live and paper trading environments via the Alpaca API.
- Generated $500 in returns over a 4-week live trading period.
- Deployed and monitored the system autonomously via scheduled execution, incorporating retry logic and error handling to ensure reliable 24/7 operation.
